Mendeleev discovered the periodic table (or Periodic System, as he called it) while attempting to organise the elements in February of 1869. He did so by writing the properties of the elements on pieces of card and arranging and rearranging them until he realised that, by putting them in order of increasing atomic weight, certain types of element regularly occurred.

~~periodic table - French translation – Linguee~~

While Dmitri Mendeleev usually gets credit for the invention of the modern periodic table in 1869, Alexandre-Emile Béguyer de Chancourtois organized the elements by atomic weight five years earlier. While Mendeleev and Chancourtois arranged elements by atomic weight, the modern periodic table is ordered according to increasing atomic number (a concept unknown in the 19th century.)
