This book updates and expands on Relational Competence Theory developed originally by Dr. Luciano L'Abate since 1976. Over the years, this theory has received various updates and expansions, especially after being produced according to a hierarchical flowchart, as common in most complex human organisations. The present book concentrates particularly on a condition called Alexithymia, similar but not the same as the Asperger Syndrome, the inability to experience feelings and to express them as emotions. Most chapters in this book expand on the first model of RCT about how feelings are experienced and expressed using an expanded revision of the Relational Answers Questionnaire. Self-presentation was evaluated with a new scale, and Selfhood was expanded with a widely revised and

This book updates and expands on Relational Competence Theory developed originally by Dr. Luciano L'Abate since 1976. Over the years, this theory has received various updates and expansions, especially after being produced according to a hierarchical flowchart, as common in most complex human organizations. The present book concentrates particularly on a condition called Alexithymia, similar but not the same as the Asperger Syndrome, the inability to experience feelings and to express them emotions. Most chapters in this book expand on the first model of RCT about how feelings are experienced and expressed using an expanded revision of the Relational Answers Questionnaire. Relational competence—the set of traits that allow people to interact with each other effectively—enjoys a long history of being recorded, studied, and analyzed. Accordingly, Relational Competence Theory (RCT) complements theories that treat individuals' personality and functioning individually by placing the individual into full family and social context. The ambitious volume *Relational Competence Theory: Research and Mental Health Applications* opens out the RCT literature with emphasis on its applicability to interventions, and updates the state of research on RCT, examining what is robust and verifiable both in the lab and the clinic. The authors begin with the conceptual and empirical bases for the theory, and sixteen models demonstrate the range of RCT concerns and their clinical relevance, including: - Socialization settings for relational competence. - The ability to control and regulate the self. - Relationship styles. - Intimacy and negotiation. - The use of practice exercises in prevention and treatment of pathology. - Appendices featuring the Relational Answers Questionnaire and other helpful tools. Relational Competence Theory both challenges and confirms much of what we know about the range of human relationships, and is important reading for researchers, scholars, and students in personality and social psychology, psychotherapy, and couple and family counseling.

This book demonstrates how clinical psychology and psychotherapy practices may reach a scientific level provided they change the three basic paradigms that have controlled those practices in the last century. These three, now outdated, paradigms, are: (1) one-on-one (2) personal contacts (3) through talk. These paradigms have served well in the past but they are no less helpful in the current digitally focused world.

This book explores current relational models of psychopathology that undergird a great many conflicts and destructive outcomes in family and intimate relationships. These models have similar features and can be considered as a group. They are all: (1) generational; (2) relational; and (3) fundamentally reactive processes stemming from existing psychopathology.

Within the field of psychology there is a proliferation of paradigms, theories, models, and dimensions without an underlying conceptual framework or theory. This conclusion has been reached by representatives of many different psychological specialties. In response to this inconsistency this book presents a hierarchical framework about important theoretical issues that are present in psychological thinking. These issues concern definitions of three major theoretical concepts in theory and practice: (a) paradigms, (b) theories, and (c) models. It focuses on defining, comparing, and contrasting these three conceptual terms. This framework clarifies differences among paradigms, theories, and models, terms which have become increasingly confused in the psychological literature. Paradigms are usually confused with theories or with models while theories are confused with models. Examples of misuses of these terms suggest the need for a hierarchical structure that views paradigms as conceptual constructions overseeing a variety of psychological theories and verifiable models.

Core Competencies of Relational Psychoanalysis provides a concise and clearly presented handbook for those who wish to study, practice, and teach the core competencies of Relational Psychoanalysis, offering primary skills in a straightforward and useable format. Roy E. Barsness offers his own research on technique and grounds these methods with superb contributions from several master clinicians, expanding the seven primary competencies: therapeutic intent, therapeutic stance/attitude; analytic listening/attunement; working within the relational dynamic, the use of patterning and linking; the importance of working through the inevitable enactments and ruptures inherent in the work; and the use of courageous speech through disciplined spontaneity. In addition, this book presents a history of Relational Psychoanalysis, offers a study on the efficacy of Relational Psychoanalysis, proposes a new relational ethic and attends to the importance of self-care in working within the intensity of such a model. A critique of the model is offered, issues of race and culture and gender and sexuality are addressed, as well as current research on neurobiology and its impact in the development of the model. The reader will find the writings easy to understand and accessible, and immediately applicable within the therapeutic setting. The practical emphasis of this text will also offer non-analytic clinicians a window into the mind of the analyst, while increasing the settings and populations in which this model can be applied and facilitate integration with other therapeutic orientations. Core Competencies of Relational Psychoanalysis is inspired by Barsness' students; he was motivated to create a primary text that could assist them in understanding the often complex and abstract models of Relational Psychoanalysis. Relevant for graduate students and novice therapists as well as experienced clinicians, supervisors, and professors, this textbook offers a foundational curriculum for the study of Relational Psychoanalysis, presents analytic technique with as clear a frame and purpose as evidenced based models, and serves as a gateway into further study in Relational Psychoanalyses.

Self-help is big business, but alas not a scientific business. The estimated 10 billion—that's with a "b"—spent each year on self-help in the United States is rarely guided by research or monitored by mental health professionals. Instead, marketing and metaphysics triumph. The more outrageous the "miraculous cure" and the "revolutionary secret," the better the sales. Of the 3,000 plus self-help books published each year, only a dozen contain controlled research documenting their effectiveness as stand-alone self-help. Of the 20,000 plus psychological and relationship web sites available on the Internet, only a couple hundred meet professional standards for accuracy and balance. Most, in fact, sell a commercial product. Pity the layperson, or for that matter, the practitioner, trying to navigate the self-help morass. We are bombarded with thousands of potential resources and contradictory advice. Should we seek wisdom in a self-help book, an online site, a 12-step group, an engaging autobiography, a treatment manual, an inspiring movie, or distance writing? Should we just do it, or just say no? Work toward change or accept what is? Love your inner child or grow out of your Peter Pan? I become confused and discouraged just contemplating the choices.
