Ambulatory Blood Pressure Monitoring In

Twenty-four-hour ambulatory blood pressure monitoring is a way of measuring and managing high blood pressure (hypertension). Hypertension is a blood pressure measurement in which the systolic (upper) blood pressure is at or above 140 and the diastolic (lower) blood pressure is at or above 90.

Ambulatory blood pressure monitoring allows many blood pressure (BP) readings to be recorded over a 24-hour period, whether the patient is awake or asleep.

24-Hour Ambulatory Blood Pressure Monitoring: Usage & Benefits

Ambulatory blood pressure monitoring is accomplished with a special device that consists of a blood pressure cuff that is worn on your arm and is attached to a small recording device that you wear on your belt. 1 You wear the ABPM device for either 24 or 48 hours, and it records your blood pressure periodically (usually at 15-minute or 30-minute intervals) throughout that period, during your routine daily activities and while you are sleeping.

What Is Ambulatory Blood Pressure Monitoring (ABPM)?

Ambulatory blood pressure monitoring (ABPM) is a non-invasive method of obtaining blood pressure readings over a 24-hour period, whilst the patient is in their own environment, representing a true reflection of their blood pressure.

Ambulatory Blood Pressure Monitors | A&D Medical

If you have high blood pressure (hypertension), your doctor may ask you to wear an ambulatory blood pressure monitor. This is a small machine, about the size of a portable radio. You wear it on your belt for 24 hours. The blood pressure cuff can be worn under your clothes and is hidden so others don't see it.

Using an Ambulatory Blood Pressure Monitor - familydoctor.org

Ambulatory Blood Pressure Monitoring. Diagnosing and treating hypertension is serious business, and as research shows, Ambulatory Blood Pressure Monitoring (ABPM) is far superior to other testing available to clinicians. Our ABPM devices provide valuable diagnostic information that in-clinic and home blood pressure monitoring systems are incapable of measuring and are validated to all 3 internationally recognized protocols.

CPT and ICD-10 coding for Ambulatory Blood Pressure Monitoring

Ambulatory blood pressure monitoring (ABPM) measures blood pressure at regular intervals. It is believed to be able to reduce the white coat hypertension effect in which a patient's blood pressure is elevated during the examination process due to nervousness and anxiety caused by being in a clinical setting. ABPM can also detect the reverse condition, masked hypertension, where the patient have normal blood pressure during the examination but uncontrolled blood pressure at home. Out-of-office me

Ambulatory blood pressure - Wikipedia

Automated ambulatory blood pressure (BP) monitoring is an outpatient procedure using fully automated devices to measure ambulatory BP at frequent intervals during the day and night in an effort to determine the variability of a patient's BP due to environmental stresses and to aid in definitively establishing a diagnosis of hypertension before committing the patient to life-long antihypertensive therapy.
