That influx of conquered peoples and lands changed the structure of the Roman government. Emperors moved the capital away from the city of Rome, too.

What did the Romans know about their world? Quite a lot, as Daryn Lehoux makes clear in this fascinating and much-needed contribution to the history and philosophy of ancient science. Lehoux contends that even though many of the Romans' views about the natural world have no place in modern science--the umbrella-footed monsters and dog-headed people that roamed the earth and the stars that foretold human destinies--their claims turn out not to be so radically different from our own. Lehoux draws upon a wide range of sources from what is unquestionably the most prolific period of ancient science, from the first century BC to the second century AD. He begins with Cicero's theologico-philosophical trilogy *On the Nature of the Gods*, *On Divination*, and *On Fate*, illustrating how Cicero's engagement with nature is closely related to his concerns in politics, religion, and law. Lehoux then guides readers through highly technical works by Galen and Ptolemy, as well as the more philosophically oriented physics and cosmologies of Lucretius, Plutarch, and Seneca, all the while exploring the complex interrelationships between the objects of scientific inquiry and the norms, processes, and structures of that inquiry. This includes not only the tools and methods the Romans used to investigate nature, but also the Romans' cultural, intellectual, political, and religious perspectives. Lehoux concludes by sketching a methodology that uses the historical material he has carefully explained to directly engage the philosophical questions of incommensurability, realism, and relativism. By situating Roman arguments about the natural world in their larger philosophical, political, and rhetorical contexts, *What Did the Romans Know?* demonstrates that the Romans had sophisticated and novel approaches to nature, approaches that were empirically rigorous, philosophically rich, and epistemologically complex.

"Two suitcases and the telephone numbers of two friends of friends: this was what I was carrying when I landed in India on October 22, 1998. What an irony in the fact that just a few years earlier, while boarding a plane from New Delhi to Rome, I had promised to myself not to go back to India, at least not until my retirement age." But as fate would have it, Stefano Pelle eventually returns to post-liberalized India as an expatriate working for the Perfetti Van Melle Group and what starts from there is a journey through emerging markets. At the heart of Stefano's psyche and his management beliefs are innumerable situations when a one-sided biased perspective would have led to failure in business deals or problems in personal life; more so being an Italian married to an Indian wife, currently settled in the Middle East and with responsibility over a geographical area extending from Bangladesh to Senegal. Overall, the story wrought here is one of hard work, ambition, and success.
