MySearchLab provides students with a complete understanding of the research process so they can complete research projects confidently and efficiently. Students and instructors with an internet connection can visit www.MySearchLab.com and receive immediate access to thousands of full articles from the EBSCO ContentSelect database. In addition, MySearchLab offers extensive content on the research process itself—including tips on how to navigate and maximize time in the campus library, a step-by-step guide on writing a research paper, and instructions on how to finish an academic assignment with endnotes and bibliography. This narrative history of psychology from the ancient Greeks through the present focuses on the main philosophical themes that have guided thinking in psychology, while carefully considering the subject in its religious, social, and literary contexts. Topics include: background to psychology, containing information about the origins, spirituality, the seventeenth, eighteenth, and nineteenth centuries; founding psychology, including scientific psychology, and Sigmund Freud and psychoanalysis; and modern psychology. An excellent reference work for psychologists and psychoanalysts.

David Krogh ' s Biology: A Guide to the Natural World leads readers on a memorable journey through the world of biology, using relevant examples, clearly-developed illustrations, and helpful insights that will resonate with you. The Technology Update features margin callouts in the text, directing you to a significantly more robust MasteringBiology program. Widely recognized as a book that students enjoy reading, David Krogh uses discussions about social concerns and health applications, along with streamlined EOC material, to help engage you with the chapter.

“ It ' s a challenge to create transformative moments with books, but [Masson] does it. ” —Susan Salter Reynolds, Los Angeles Times In this revelatory work, Jeffrey Moussaieff Masson shows how food affects our moral selves, our health, and our planet. Masson investigates how denial keeps us from recognizing the animal at the end of our fork and urges readers to consciously make decisions about food.

Appropriate for Introductory Biology courses. This best-selling introductory text, widely praised for its lively writing style and impeccable scientific presentation, has been revised to reflect the changing dynamics of introductory biology. Emphasizing concepts over facts and critical thinking over memorization, Life on Earth presents the dynamic processes at work in biology and conveys the relevance and excitement of this discipline to students.

The book has been carefully written to integrate the necessary biological facts into a broader conceptual framework that stresses unifying themes and the ways in which an understanding of biology can enrich and enlighten day-to-day living.
