"Aldous Huxley's tour de force, Brave New World is a darkly satiric vision of a "utopian" future — where humans are genetically bred and pharmaceutically anesthetized to passively serve a ruling order. A powerful work of speculative fiction that has enthralled and terrified readers for generations, it remains remarkably relevant to this day as both a warning to be heeded as we head into tomorrow and as thought-provoking ...

The world in Aldous Huxley's Brave New World has one goal: technological progress. The morals and aspirations of the society are not those of our society today - such as family, love, and success - but instead are focused around industry, economy, and technologic growth and improvement.

The article seeks to map these consequences by rethinking the maxims of the brave new world in relation to three main themes: biopolitics, nihilism and network society. Indeed, seen through this conceptual prism, there is a remarkable homology between Huxley's Brave New World and our world.

Brave New World Revisited (Harper & Brothers, US, 1958; Chatto & Windus, UK, 1959), written by Huxley almost thirty years after Brave New World, is a non-fiction work in which Huxley considered whether the world had moved toward or away from his vision of the future from the 1930s. He believed when he wrote the original novel that it was a reasonable guess as to where the world might go in the future.

The more debt central banks hold, the more governments will rely on them to keep rates low to keep debt sustainable, which in turn makes it hard to raise interest rates when necessary.

Now reissued in a gorgeous hardcover edition: "one of the most prophetic dystopian works of the 20th century" (Wall Street Journal) must be read and understood by anyone concerned with preserving the human spirit in the face of our "brave new world." Huxley's masterpiece has become a bestseller once again after the American election. Aldous Huxley's profoundly important classic of world literature, *Brave New World* is a searching vision of an unequal, technologically-advanced future where humans are genetically bred, socially indoctrinated, and pharmaceutically anesthetized to passively uphold an authoritarian ruling order whose motto is "Community, Identity, Stability."—all at the cost of our freedom, humanity, and perhaps our souls. "A genius [who] who spent his life decrying the onward march of the Machine" (The New Yorker), Huxley was a man of incomparable talents: equally an artist, a spiritual seeker, and one of history's keenest observers of human nature and civilization. *Brave New World*, his masterpiece, has enthralled and terrified millions of readers, and retains its urgent relevance to this day as both a warning as we head into tomorrow and as a thought-provoking, satisfying work of literature. Written in the shadow of the rise of fascism during the 1930s, *Brave New World* likewise speaks to a twenty-first-century world dominated by mass-entertainment, technology, medicine and pharmaceuticals, the arts of persuasion, and the hidden influence of elites.

Aldous Huxley's prophetic novel of ideas warned of a terrible future then 600 years away. Though *Brave New World* was published less than a century ago in 1932, many elements of the novel's dystopic future

now seem an eerily familiar part of life in the 21st century. These essays analyze the influence of Brave New World as a literary and philosophical document and describe how Huxley forecast the problems of late capitalism. Topics include the anti-utopian ideals represented by the rigid caste system depicted, the novel's influence on the philosophy of "culture industry" philosophers Max Horkheimer and Theodor Adorno, the Nietzschean birth of tragedy in the novel's penultimate scene, and the relationship of the novel to other dystopian works.

Aldous Huxley's 1932 book Brave New World foresees a world in which technological advances have obliterated morality and freedom. John Feinberg and Paul Feinberg, in the first edition of Ethics for a Brave New World, noted how Huxley landed frighteningly close to the truth. Their book responded to ethical crises such as abortion, euthanasia, capital punishment, and genetic engineering by looking to Scripture for principles to guide us through the moral quagmires of our time. Now dramatically updated and expanded, this edition of Ethics for a Brave New World seeks to maintain the relevance, rigorous scholarship, and biblical faithfulness of the first edition. While many of the topics covered in the book remain the same, John Feinberg has revised each chapter to keep it current with contemporary trends and to respond to the most recent scholarship. There is a new chapter on stem cell research and greatly expanded material on issues such as homosexuality and genetic engineering. This important resource will be a valuable guide for students and those seeking answers to ethical dilemmas.

This collection of essays provides new readings of Huxley's classic dystopian satire, *Brave New World* (1932). Leading international scholars consider from new angles the historical contexts in which the book was written and the cultural legacies in which it looms large. The volume affirms Huxley's prescient critiques of modernity and his continuing relevance to debates about political power, art, and the vexed relationship between nature and humankind. Individual chapters explore connections between *Brave New World* and the nature of utopia, the 1930s American Technocracy movement, education and social control, pleasure, reproduction, futurology, inter-war periodical networks, motherhood, ethics and the Anthropocene, islands, and the moral life. The volume also includes a 'Foreword' written by David Bradshaw, one of the world's top Huxley scholars. Timely and consistently illuminating, this collection is essential reading for students, critics, and Huxley enthusiasts alike.

Describes the background of *Brave New World*, discusses its themes, and looks at its critical reception

In *Dawn and the Darkest Hour*, poet and author George Woodcock explores the famously complex life and career of Aldous Huxley. A brilliant and satirical novelist of ideas; a popular journalist and essayist on scientific and political subjects; a prophet of the future (*Brave New World*); a pioneer of psychedelic experimentation (*The Doors of Perception*), Huxley was a man plagued by excessive intellectual curiosity and a withdrawn melancholic nature. In the dramatic

range of his characters and the encyclopedic quality of his thought, Huxley expressed some of the most interesting and disturbing commentary about the condition of human beings and their relationship to society. As Woodcock traced the progress of Huxley's works, he recognized attempts to bring about a synthesis of knowledge "that would give total meaning to existence." In this striking and encompassing critical biography, Woodcock persuasively asks us to reconsider Huxley's works as the stages of "a spiritual pilgrimage," as he demonstrates that Huxley's entire remarkable oeuvre must be taken as a whole, as a unified "movement out of darkness toward light." It is a fascinating journey that provides a window into Huxley's life and character, that shows an intellectual continually striving for knowledge—intuitive, scientific and otherwise—and as such, is certain to renew interest in one of the most the most important and influential minds of the twentieth century. George Woodcock (1912 1995)—award-winning poet, author, essayist and widely known as a literary journalist and historian—published more than 90 titles on history, biography, philosophy, poetry and literary criticism.

control, humanity, technology, and influence, Aldous Huxley's enduring classic is a reflection and a warning of the age in which it was written, yet remains frighteningly relevant today. With its surreal imagery and otherworldly backdrop, Brave New World adapts beautifully to the graphic novel form. Fred Fordham's singular artistic flair and attention to detail and color captures this thought-provoking novel as never before, and introduces it to a new generation, and countless modern readers, in a fresh and compelling way.

"In the next decade and a half, China and India will become two of the world's indispensable powers--whether they rise peacefully or not. During that time, Asia will surpass the combined strength of North America and Europe in economic might, population size, and military spending. Both India and China will have vetoes over many international decisions, from climate change to global trade, human rights, and business standards. From her front row view of this colossal shift, first at the State Department and now as an advisor to American business leaders, Anja Manuel escorts the reader on an intimate tour of the corridors of power in Delhi and Beijing. Her encounters with political and business leaders reveal how each country's history and politics influences their conduct today. Through vibrant stories, she reveals how each country is working to surmount enormous challenges--from the crushing poverty of Indian slum dwellers and Chinese factory workers, to outrageous corruption scandals, rotting rivers, unbreathable air, and managing their citizens' discontent. We wring our hands about China, Manuel

writes, while we underestimate India, which will be the most important country outside the West to shape China's rise. Manuel shows us that a different path is possible--we can bring China and India along as partners rather than alienating one or both, and thus extend our own leadership in the world"--

Information technology has had a profound effect on almost every aspect of our lives including the way we purchase products, communicate with others, receive health care services, and deliver education and training. It has also had a major impact on human resource management (HR) processes, and it has transformed the way that we recruit, select, motivate, and retain employees (Gueutal & Stone, 2005; Kavanagh, Thite, & Johnson, 2015). For example, some estimates indicated that 100 % of large organizations now use web-based recruiting (Sierra-Cedar, 2016-2017), and over half of the training conducted in America is delivered using technology-based methods (American Society for Training and Development, 2015). Results of a survey by the Society for Human Resource Management (SHRM) (2002) revealed that technology is one of the major drivers of change in today's HR departments. In spite of the increased use of technology in the field of HR, relatively little research has examined the acceptance and effectiveness of electronic human resource management (eHRM) methods. As a consequence, practitioners are implementing these new systems without the benefit of research. Thus, the primary purpose of this issue is to review the results of research on a number of important eHRM practices including e-recruitment, e-selection, gamification, e-

socialization, e-learning, and e-performance management. It also considers how technology can be used to manage task-based contingent workers, and examines the problems associated with cyberdeviance in organizations. The chapters in this series should be extremely beneficial for HR researchers and practitioners who are employing these new systems.

This and the next Annual feature a collection of Aldous Huxley's early essays in art criticism, for the most part published anonymously. The present issue focuses on Huxley's critical approach to painting, particularly to Modernist works (Part I); The forthcoming Annual will concentrate on Huxley's appraisal of architecture, applied arts and sculpture in the 1920s (Part II). Bernfried Nugel is head of the Centre for Aldous Huxley Studies at the English Seminar of the University of Muenster (Germany). Jerome Meckier is a researcher at the University of Kentucky and at the Centre for Aldous Huxley Studies at the English Seminar of the University of Muenster.
