In this system, an adequate level of a hormone in the blood automatically stops the release of additional hormone (somewhat like a thermostat). As the blood level of the hormone decreases, the gland is stimulated to secrete more of it. Another control mechanism is the production of two different hormones whose actions are opposite to each other.

Chapter 10: Endocrine System Flashcards | Quizlet

The endocrine system is a biochemical communication network through which several small glands control a broad range of vital body activities. Maintain the internal environment (homeostasis). The major endocrine glands are the: Pituitary- located in brain
