Dispute System Design walks readers through the art of successfully designing a system for preventing, managing, and resolving conflicts and legally-framed disputes. Drawing on decades of expertise as instructors and consultants, the authors show how dispute systems design can be used within all types of organizations, including business firms, nonprofit organizations, and international and transnational bodies. This book has two parts: the first teaches readers the foundations of Dispute System Design (DSD), describing bedrock concepts, and case chapters exploring DSD across a range of experiences, including public and community justice, conflict within and beyond organizations, international and comparative systems, and multi-jurisdictional and complex systems. This book is intended for anyone who is interested in the theory or practice of DSD, who uses or wants to understand mediation, arbitration, court trial, or other dispute

E-commerce offers immense challenges to traditional dispute resolution methods, as it entails parties often located in different parts of the world making contracts with each other at the click of a mouse. The use of traditional litigation for disputes arising in this forum is often inconvenient, impractical, time-consuming and expensive due to the low value of the transactions and the physical distance between the parties. Thus modern legal systems face a crucial choice: either to adopt traditional dispute resolution methods that have served the legal systems well for hundreds of years or to find new methods which are better suited to a world not anchored in territorial borders. Online Dispute Resolution (ODR), originally an off-shoot of Alternative Dispute Resolution (ADR), takes advantage of the speed and convenience of the Internet, becoming the best, and often the only option for enhancing consumer redress and strengthening their trust in e-commerce. This book provides an in-depth account of the potential of ODR for European consumers, offering a comprehensive and up to date analysis of the development of ODR. It considers the current expansion of ODR and evaluates the challenges posed in its growth. The book proposes the creation of legal standards to close the gap between the potential of ODR services and their actual use, arguing that ODR, if it is to realise its

The use of new information and communication technologies both inside the courts and in private online dispute resolution services is quickly changing everyday conflict management. However, the implications of the increasingly disruptive role of technology in dispute resolution remain largely undiscussed. In this book, assistant professor of law and digitalisation Riikka Koulu examines the multifaceted phenomenon of dispute resolution technology, focusing specifically on private enforcement, which modern technology enables on an unforeseen scale. The increase in private enforcement confounds legal structures and challenges the nation-state's monopoly on violence. And, in this respect, the author argues that the technology-driven privatisation of enforcement – from direct enforcement of e-commerce platforms to self-executing smart contracts in the blockchain – brings the ethics of law's coercive nature out into the open. This development constitutes a new, and dangerous, grey area of conflict management, which calls for transparency and public debate on the ethical implications of dispute resolution technology.

Improving access to justice has been an ongoing process, and on-demand justice should be a natural part of our increasingly on-demand society. What can we do for example when Facebook blocks our account, we're harassed on Twitter, discover that our credit report contains errors, or receive a negative review on Airbnb? How do we effectively resolve these and other such issues? Digital Justice introduces the reader to new technological tools to resolve and prevent disputes bringing dispute resolution to cyberspace, where those who would never look to a court for assistance can find help for instance via a smartphone. The authors focus particular attention on five areas that have seen great innovation as well as large volumes of disputes: ecommerce, healthcare, social media, labor, and the courts. As conflicts escalate with the increase in innovation, the authors emphasize the need for new dispute resolution processes and new ways to avoid disputes, something that has been ignored by those seeking to improve access to justice in the past.
