“Fluent, mordant, authentic, propulsive...wonderfully lit from within” (Lee Child, The New York Times Book Review), this critically acclaimed, stunningly mature literary debut is the darkly comic story of a car thief on the run in the gritty and arid landscape of the 1970s Texas panhandle. In this “stellar debut,” (Publishers Weekly) car thief Troy Falconer returns home after years of wandering to reunite with his younger brother, Harlan. The two set out in search of Harlan’s wife, Bettie, who’s left him cold and run away with the little money he had. When stealing a station wagon for their journey, Troy and Harlan find they’ve accidentally kidnapped a Mennonite girl, Martha Zacharias, sleeping in the back of the car. But Martha turns out to be a stubborn survivor who refuses to be sent home, so together, these unlikely road companions haphazardly attempt to escape across the Mexican border, pursued by the police and Martha’s vengeful father. But this is only one layer of Troy’s story. Through interjecting entries from his journal that span decades of an unraveling life, we learn that Troy has become so estranged from society that he’s shunned the very idea of personal property. Instead of claiming possessions, he works motels, stealing the suitcases and cars of men roughly his size, living with their things until those things feel too much like his own, at which point he finds another motel and vanishes again into another man’s identity. Richly nuanced and complex, “like a nesting doll, [Presidio] continually uncovers stories within stories” (Ian Stansel, author of The Last Cowboys of San Geronimo). With a page-turning plot, prose as gritty and austere as the novel’s Texas panhandle setting, and a determined yet doomed cast of characters ranging from con artists to religious outcasts, this “rich and rare book” (Annie Proulx, author of Barkskins) packs a kick like a shot of whiskey. Perfect for fans of Cormac McCarthy, Denis Johnson, and Larry McMurtry, who said that Kennedy “captures the funny yet tragic relentlessness of survival in an unforgiving place. Let’s hope he keeps his novelistic cool and brings us much, much more.”

Environmental concerns and advances in architectural technologies have lead to a greater number of green buildings or buildings with green, eco-friendly elements. However, from a practical standpoint, there is no incident reporting system in the world that tracks data on fire incidents in green buildings. Fire safety objectives are not explicitly considered in most green rating schemes, and green design features have been associated with photovoltaic panels and roof materials, lightweight timber frame buildings, and combustible insulation materials. Fire Safety Challenges of Green Buildings is the result of an extensive global literature review that sought to identify issues related to green building elements or features and ways to ensure those issues are tracked for future improvement. The book identifies actual incidents of fires in green buildings or involving green building elements, points out issues with green building elements that would increase fire risk, clarifies reports and studies that address ways to reduce fire risk in green design elements, and compares research studies that explicitly incorporate fire safety into green building design. The authors also pinpoint gaps and specific research needs associated with understanding and addressing fire risk and hazards with green building design. Using their data, the authors developed a set of matrices relating these green attributes and potential fire hazards. With these comprehensive tools, potential mitigation strategies for addressing the relative increase in fire risk or hazard associated with the green building elements and features have been identified. Fire Safety Challenges of Green Buildings is intended for practitioners as a tool for analyzing building safety issues in green architecture and developing methods for tracking data related to green design elements and their potential hazards. Researchers working in a related field will also find the book valuable.

James Halderman and James Linder are experts in their field. Their book is designed to help students studying for qualifications in Engine Performance and Drivability, Fuel Emissions System and Automotive Principles.

Ethics for the Information Age is appropriate for any standalone Computers and Society or Computer Ethics course offered by a computer science, business, or philosophy department, as well as special modules in any advanced CS course. It is also appropriate for readers interested in computers and society or computer ethics. In an era where information technology changes constantly, a thoughtful response to these rapid changes requires a basic understanding of IT history, an awareness of current issues, and a familiarity with ethics. Ethics for the Information Ageis unique in its balanced coverage of ethical theories used to analyze problems encountered by computer professionals in today’s environment. By presenting provocative issues such as social networking, government surveillance, and intellectual property from all points of view, this market-leading text challenges students to think critically and draw their own conclusions, which ultimately prepares them to become responsible, ethical users of future technologies. i Teaching and Learning Experience This program presents a better teaching and learning experience–for you and your students. It will help: Encourage Critical Thinking: A balanced, impartial approach to ethical issues avoids biased arguments, encouraging students to consider and analyze issues for themselves. Keep Your Course Current and Relevant: A thoughtful response to information technology requires an awareness of current information-technology-related issues. Support Learning: Resources are available to expand on the topics presented in the text.

Profiles technology as an evolving international system with predictable trends, counseling readers on how to prepare themselves and future generations by anticipating and steering their choices toward developing needs.
