CICS Tutorial part-1. CICS is a transaction procession system owned by IBM and runs under Z/OS operating system. CICS stands for Customer Information Control System which works as a front end for the business applications written in COBOL, PL/1, C, C++, Assembler, PHP and JAVA but most of the applications which CICS supports are written in COBOL. CICS controls the interaction BTW Users and Applications by providing a secure multi-user platform.

CICS Tutorial | COBOL CICS Basics

CICS is configured under your control during system initialization. You select a system initialization table (SIT) and, through it, CICS selects other control tables. Each control table is created separately and can be recreated at any time before system initialization. You prepare the required control tables by coding the appropriate macros.

Introduction to CICS control tables and macros

CICS - BMS - BMS is known as Basic Mapping Support. An application consists of formatted screens which act as a bridge between the terminal and the CICS programs. For commun

CICS stands for Customer Information Control System. It is a general-purpose transaction processing subsystem for the z/OS operating system. CICS provides services for running an application online, by request, at the same time as many other users are submitting requests to run the same applications, using the same files and programs.

Introduction to CICS - IBM

IBM CICS is a family of mixed language application servers that provide online transaction management and connectivity for applications on IBM mainframe systems under z/OS and z/VSE. CICS family products are designed as middleware and support rapid, high-volume online transaction processing. A CICS transaction is a unit of processing initiated by a single request that may affect one or more objects. This processing is usually interactive, but background transactions are possible. CICS Transactio
