The Technical and Vocational Education and Training (TVET) college environment is marked by increasingly stark juxtapositions between what needs to be achieved in the post-school education sector and the increasing difficulty of current conditions. The 'triple challenge' of poverty, inequality and unemployment weighs heavily on the social, political and economic fabric of the country and expectations are high that the TVET colleges can make a pivotal contribution to counter these challenges. Despite laudable increases in TVET enrolment, the education system needs to work harder to accommodate the weight of demand for post school further education and training (FET) band qualifications from young people not in education, employment or training. At the same time, it is vital to secure adequate quality in TVET programmes which depend so much on the competence and commitment of college lecturers. This collection offers a set of research papers that provide new analytic and empirical material on: **!** The political economy of TVET types in different countries which, by comparison, illuminate the South African case; **!** A periodisation of government interventions in the TVET sector over the last three decades; **!** The unsettled state and status of TVET lecturers in relation to their job requirements and conditions of service; **!** The halting evolution of collegial relationships between college lecturers towards higher collegiality; **!** Employer expectations of college graduates and how colleges are responding; and **!** An analysis of the outcomes of a college improvement intervention in Limpopo and the Eastern Cape. This book will offer valuable information and insights for decision-makers as well as analysts of institutional change concerning links between education and economic growth, with particular regard to TVET graduates' employment rates.

Adult learning systems play a crucial role in helping people adapt to the changing world of work and develop relevant skills. Community Education and Training has been brought forward as a possible way to foster adult learning in South Africa, especially among disadvantaged groups. South Africa ...

"The lack of academic integrity combined with the prevalence of fraud and other forms of unethical behavior are problems that higher education faces in both developing and developed countries, at mass and elite universities, and at public and private institutions. While academic misconduct is not new, massification, internationalization, privatization, digitalization, and commercialization have placed ethical challenges higher on the agenda for many universities. Corruption in academia is particularly unfortunate, not only because the high social regard that universities have traditionally enjoyed, but also because students-young people in critical formative years-spend a significant amount of time in universities. How they experience corruption while enrolled might influence their later personal and professional behavior, the future of their country, and much more. Further, the corruption of the research enterprise is especially serious for the future of science. The contributors to Corruption in Higher Education: Global Challenges and Responses bring a range of perspectives to this critical topic"--

This book presents a collection of different researches and results on "e-learning". The chapters cover the deficiencies, requirements, advantages and disadvantages of e-learning and distance learning. So, the authors reported their research and analysis results on "e-learning" according to their areas of expertise.

Worldwide, in Africa and in South Africa, the importance of the doctorate has increased disproportionately in relation to its share of the overall graduate output over the past decade. This heightened attention has not only been concerned with the traditional role of the PhD, namely the provision of future academics; rather, it has focused on the increasingly important role that higher education - and, particularly, high-level skills - is perceived to play in national development and the knowledge economy. This book is unique in the area of research into doctoral studies because it draws on a large number of studies conducted by the Centre of Higher Education Trust (CHET) and the Centre for Research on Evaluation, Science and Technology (CREST), as well as on studies from the rest of Africa and the world. In addition to the historical studies, new quantitative and qualitative research was undertaken to produce the evidence base for the analyses presented in the book. The findings presented in Doctoral Education in South Africa pose anew at least six tough policy questions that the country has struggled with since 1994, and continues to struggle with, if it wishes to gear up the system to meet the target of 5 000 new doctorates a year by 2030. Discourses framed around the single imperatives of growth, efficiency, transformation or quality will not, however, generate the kind of policy discourses required to resolve these tough policy questions effectively. What is needed is a change in approach that accommodates multiple imperatives and allows for these to be addressed simultaneously.

This open access collection examines how higher education responds to the demands of the automation economy and the fourth industrial revolution. Considering significant trends in how people are learning, coupled with the ways in which different higher education institutions and education stakeholders are implementing adaptations, it looks at new programs and technological advances that are changing how and why we teach and learn. The book addresses trends in liberal arts integration of STEM innovations, the changing role of libraries in the digital age, global trends in youth mobility, and the development of lifelong learning programs. This is coupled with case study assessments of the various ways China, Singapore, South Africa and Costa Rica are preparing their populations for significant shifts in labour market demands **!** shifts that are already underway. Offering examples of new frameworks in which collaboration between government, industry, and higher education institutions can prevent lagging behind in this fast changing environment, this book is a key read for anyone wanting to understand how the world should respond to the radical technological shifts underway on the frontline of higher education.

This book was developed in order to deliver a unit standards-based curriculum that is in line with the National Qualifications-Framework (NQF).

This book brings together fifteen contributions from presenters at the 25th IUPAC International Conference on Chemistry Education 2018, held in Sydney. Written by a highly diverse group of chemistry educators working within different national and institutional contexts with the common goal of improving student learning, the book presents research in multiple facets of the cutting edge of chemistry education, offering insights into the application of learning theories in chemistry combined with practical experience in implementing teaching strategies. The chapters are arranged according to the themes novel pedagogies, dynamic teaching environments, new approaches in assessment and professional skills **!** each of which is of substantial current interest to the science education communities. Providing an overview of contemporary practice, this book helps improve student learning outcomes. Many of the teaching strategies presented are transferable to other disciplines and are of great interest to the global community of tertiary chemistry educators as well as readers in the areas of secondary STEM education and other disciplines.
