FSN analysis is yet another acronym used in inventory

management, however, rather than just being a

buzzword, it really does hold a lot of merit to the

stock manager. It is one of several useful analyses of

inventory that facilitate accurate control and should

be considered by anyone wanting to better

understand the delicate nature of their products and

sales and how to optimise them to reduce inventory

overheads and increase the bottom line.

FSN Analysis - Inventory Management Software

FSN Analysis is an inventory management technique which is based on the rate of consumption of spares and goods in an organization. This analysis divides the inventory into three categories based on their speed or rate of utilization, their consumption rate, and average stay. FSN stands for Fast-moving, Slow-moving, and Non-moving.

FSN Analysis: Meaning, Calculation, Importance and Usage

Also known as the FSN analysis, Fast moving, the slow-moving and non-moving inventory method is about segregating products based on their consumption rate, quantity, and the rate at which the inventory is used. Fast-moving inventory, as the name suggests, comprises the stock that moves quickly and needs to be replenished very often.
