Answer: The optimal solution is obtained by maximizing the payoff function $(x, y) = 74 - 2x - 2y$. The first-order maximization condition is $\frac{\partial \pi}{\partial x} = 78 - 4x = 0$ implying that $x = 19.5$ is the optimal solution. For $x = 19.5$ the solution is $y = 18$ and for $x = 19.5, y = 18$. $\forall (x, y)$ Show that in general, smaller people should drink less than larger people.

Solution Manual Game Theory: An Introduction
