for sustainable timber production. In NSW, native State forests have been harvested and regenerated many times over the past 100 years or more and careful planning and management ensures they will continue to produce a sustainable supply of timber well into the future.

Forestry Corporation - Silviculture

The tenth edition of the classic work, *The Practice of Silviculture: Applied Forest Ecology*, includes the most current information and the results of research on the many issues that are relevant to forests and forestry. The text covers such timely topics as biofuels and intensive timber production, ecosystem and landscape scale management of public lands, ecosystem services, surface drinking water supplies, urban and community greenspace, forest carbon, fire and climate, and much more.

Silviculture: Concepts and Applications reflects a belief that all the tools of silviculture have a useful role in modern forestry. Through careful analysis and creative planning, foresters can address a wide array of commodity and nonmarket interests and opportunities while

maintaining dynamic and resilient forests. A landowner ' s needs, circumstances, and site conditions guide a silviculturist ' s judgment and decision making in finding the best ways to integrate the biologic-ecologic, economic-financial, and managerial-administrative requirements at hand. The Third Edition of this influential text provides a foundational basis for rigorous discussion of techniques. The inclusion of numerous real-world examples and balanced coverage of past and current practices broadens the concept of silviculture and the ways that managers can use it to address both traditional and emerging interests in forests. A thorough discussion of new and proven interpretations increasingly directs the attention of foresters toward the role silviculture plays in creating, maintaining, rehabilitating, and restoring forests that can sustain an expanding variety of ecosystem services.

Silvicultural practices in the Douglas-fir region evolved through a combination of formal research, observation, and practical experience of forest managers and silviculturists, and changing economic and social factors. This process began more than a century ago and still continues. It has had a great influence on the economic well-being of the region and on the present characteristics of the regions forests. This long history is unknown to most of the public, and much of it is unfamiliar to many natural resource specialists outside (and even within) the field of silviculture. We trace the history of how we got where we are today and the contribution of silvicultural research to the evolution of forest practices. We give special attention to the large body of information developed in the first half of the past century that is becoming increasingly unfamiliar to both operational foresters and perhaps more importantly to those engaged in forestry research. We also discuss some current trends in

silviculture and silviculture-related research.

Describes the history and formation of Russian forest policy, legislation, and management from the 8th century to the present time. The beginning of forest science in Russia is described. Advances in soil science, forest ecology, valuation, organization, and management, and the theory of forest use over historical time are discussed. Contributions of influential Russian leaders are described by field and time period. Russian forests comprise 22% of the world's total forests and over half of the world's coniferous forest area and world coniferous growing stock. Illustrated with historical photographs.
