File Type PDF Head Injury Assessment And Early Management Nice

This guideline covers the assessment and early management of head injury in children, young people and adults. It promotes effective clinical assessment so that people receive the right care for the severity of their head injury, including referral directly to specialist care if needed. In September 2019, we changed our advice to indicate that adults and children who are on any anticoagulant (not just warfarin) should have a CT head scan within 8 hours of head injury.

Overview | Head injury: assessment and early management ...

1.3.8 Patients who, on initial assessment, are considered to be at low risk for clinically important brain injury and/or cervical spine injury should be re-examined within a further hour by an emergency department clinician. Part of this assessment should fully establish

the need to request CT imaging of the head and/or imaging of the cervical spine.

1 Recommendations | Head injury: assessment and early ...

For the purposes of this guideline, head injury is defined as any trauma to the head other than superficial injuries to the face. Head injury is the commonest cause of death and disability in people aged 1–40 years in the UK. Each year, 1.4 million people attend emergency departments in England and Wales with a recent head injury. Between 33% and 50% of these are children aged under 15 years. Annually, about 200,000 people are admitted to hospital with head injury.
