Perhaps uniquely among mathematical topics, complex analysis presents the student with the opportunity to learn a thoroughly developed subject that is rich in both theory and applications. Even in an introductory course, the theorems and

techniques can have elegant formulations. But for any of these profound results, the student is often left asking: What does it really mean? Where does it come from? In *Complex Made Simple*, David Ullrich shows the student how to think like an analyst. In many cases, results are discovered or derived, with an explanation

of how the students might have found the theorem on their own. Ullrich explains why a proof works. He will also, sometimes, explain why a tempting idea does not work. Complex Made Simple looks at the Dirichlet problem for harmonic functions twice: once using the Poisson integral for the unit disk and again

in an informal section on Brownian motion, where the reader can understand intuitively how the Dirichlet problem works for general domains. Ullrich also takes considerable care to discuss the modular group, modular function, and covering maps, which become important ingredients in his modern treatment of the

often-overlooked original proof of the Big Picard Theorem. This book is suitable for a first-year course in complex analysis.

The exposition is aimed directly at the students, with plenty of details included.

The prerequisite is a good course in advanced calculus or undergraduate analysis.

Learn the calming, traditional craft of kumihimo - Japanese braiding - through step-by-step projects. Kumihimo is the ancient art of Japanese braidmaking; admired for its dual qualities of usefulness and beauty, and associated with both fashion and the samurai. In this instructional book, Jacqui Carey teaches

the use of a marudai (round stand) to produce a variety of different types of braids, which can then be used to create countless combinations of colour, texture and material. Clear step-by-step photographs guide the beginner through each of the projects, and many inspirational examples of the variety you

can create are shown. The rhythmic movements, feel and sound of the marudai in use make this traditional craft a soothing, absorbing and aesthetically pleasing experience; perfect for weaving a calm area in your day.

Great Maritime Inventions 1833-1950 is a

*Page 41/50*

delightful look at how innovative Maritime ideas changed the world. Between 1833 and 1950, over 3,300 patents were granted to residents of New Brunswick, Nova Scotia and PEI. From the scuba tank to the variable pitch propeller to two-piece long underwear, Great Maritime Inventions profiles the best of the best.

Included are inventions that are considered to be great advances in science, those that have substantially changed the course of development of technology, or those that have enjoyed a lasting success that can still be remembered or observed to this day. All of the inventions described in the book were completely novel in their

day. Each patent is first in its classification, or else its claims are so broad that the intellectual property protection it gave covered every possible precursor. Before a patent was granted, an applicant had to declare that their invention was entirely new. Each application then underwent a thorough examination by expert

examiners at the patent office. Each of the patents in Great Maritime Inventions were found to represent knowledge newly available to the public, and to be an important step forward in engineering or in developing consumer products that enhance our lives. Not all inventions were spectacular. In fact, many of these

inventions never made it into the history books. It is only after fifty years or more that we realize the influence that every one of these inventions has had on our society. Each invention, large or small, was an important link in the chain of evolution of science and useful arts and has improved the way we live today.
