In the post-Cold War world, trade is the new arena for competition-between nations, between groups, between ethical and theoretical ideas. In this revised and updated second edition of Dilemmas of International Trade political economist Bruce Moon puts contemporary trade events--NAFTA, United States-Japan controversies, the Uruguay Round of GATT, China's Most Favored Nation status, the founding of the World Trade Organization--into historical and theoretical perspective with the British Corn Laws, the Great Depression, the Bretton Woods system, and the origins of the European Union. Economic theory, terms, and concepts are clearly explained and contextualized with those from international relations. Throughout the book, three central dilemmas are examined: the unequal distribution of

Manual income and wealth created by international trade, the tradeoff among competing values that trade requires, and the difficult interrelationship between economic and foreign policy goals within and among trading nations. Though internationally framed, each dilemma has ramifications at a variety of levels all the way down to the individual's role in the global economy-as a consumer, as a citizen, and ultimately as a moral agent.

Trade is a cornerstone concept in economics worldwide. This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research. In *Advanced International Trade*, Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and

these materials are supplemented in each chapter by theoretical and empirical exercises. Feenstra explores a wealth of material, such as the Ricardian and Heckscher-Ohlin models, extensions to many goods and factors, and the role of tariffs, quotas, and other trade policies. He examines imperfect competition, offshoring, political economy, multinationals, endogenous growth, the gravity equation, and the organization of the firm in international trade. Feenstra also includes a new chapter on monopolistic competition with heterogeneous firms, with many applications of that model. In addition to known results, the book looks at some particularly important unpublished results by various authors. Two appendices draw on index numbers and discrete choice models to describe methods applicable to research problems in international trade.
