This book "Concise notes in Biochemistry for Physiotherapy and Allied Health Sciences graduates" is a comprehensive yet concise textbook of biochemistry concepts. It primarily targets students pursuing courses in physiotherapy and allied health sciences field having biochemistry in their course but not in-depth. It is suitable for the readers of undergraduate and post-graduate courses in biomedical, paramedical, and allied health sciences such as Nursing, Optometry, MLT, etc. This book is authored in a manner to develop interest among students to facilitate effortless understanding of the subject. Further, the key points of each topic are also projected having a pointwise summary. This book will also provide job seekers of various examinations and interviews with a quick revision of biochemistry at a glance.

Authors Dave Nelson and Mike Cox combine the best of the laboratory and best of the classroom, introducing exciting new developments while communicating basic principles of biochemistry.

This book provides a thought provoking outline of the solutions already in hand to the challenges now facing humanity with respect to prevalent gross social and economic inequalities, ecological thresholds and tipping points, and the ever-looming threat of climate catastrophe. The authors find these solutions in the arenas of renewable energy systems, agroecological methods, and reimagined social organization. Clarity is brought to the political economic obstacles standing in the way as well as the false solutions and alleged barriers that pervade the discourse thereby delaying and obstructing progress to the solutions advanced. The authors provoke readers to face up to these challenges by demonstrating how people, all over the world, have already begun this effort through collective action ranging from the local to the global community. Drawing on their own and many other scholar's research, they reject a reliance on the 'business as usual' approach trusting the capitalist market and existing global institutions, and provide an accessible popular account with thoroughly footnoted endnotes that contain technical details and references to the scientific literature. *The Earth is Not for Sale* informs its readers and provides well-documented solutions in a bid to inspire readers to think critically, and potentially become more active in society.

This is a collective volume on present-day globalisation with nine chapters from authors of several academic disciplines. It covers wide aspects, ranging from the nature, impact, challenges and implications of globalisation to responses from a country or community when facing globalisation today or tomorrow. Policy suggestions are also made. This book will hence help the reader to understand the currently debated issues.

With authors who are accomplished researchers and educators, *Organic Chemistry* helps students understand the connection between structure and function to prepare them to understand mechanisms and solve practical problems in organic chemistry. The new edition brings in the latest research breakthroughs and includes expanded problem-solving help.

"[The book] has been designed for one- and two-semester courses for undergraduates majoring in biochemistry and related disciplines, as well as for graduate students who require a broad introduction to biochemistry. It is also suited for courses at medical, dental, veterinary, pharmacy, and other professional schools. The book will be used most successfully by students who have completed two years of college-level chemistry, including organic chemistry, and have received at least an introduction to biology. While some background in physics and physical chemistry would be useful, all relevant principles are introduced in a manner that should make them accessible to most students"--Preface.

The third edition of this well-received text provides a state-of-the-art treatise on modern clinical practice relating to hyperlipidaemia and lipoprotein disorders, conditions responsible for a huge amount of morbidity and mortality in Western countries and, increasingly, the developing world. The clinical evidence underlying the treatment of hyperlipidaemia has burgeoned since the second edition published in 1994, with the publication of the results of several clinical trials on statin drugs, and the subsequent appearance of national and international guidelines for

cholesterol lowering in coronary prevention. There has also been considerable development in the definition of cardiovascular risk, and the methodology for identifying high-risk patients. All of these aspects are addressed fully in the new edition. In addition, the book offers helpful summaries of the background biochemistry of lipoprotein metabolism and atherosclerosis where relevant, putting the subject in the context of its pathophysiology and epidemiology. The text relating to clinical aspects has a strong evidence base, reviewing, in particular, areas of uncertainty and controversy. Drawing on the wealth of experience of the author, and representing his widely respected views on the subject, readers will find this comprehensive, well-referenced and accessible book invaluable.
