The Rancer Method is presented as page-by-page instructions to be implemented with readily-available method books so that every piano teacher can follow it and do well by their students. "By focusing on the abilities rather than the deficits of people with learning, perceptual, motor, and other differences, Kupferstein and Rancer have developed a revolutionary piano pedagogy that will empower individuals with autism and other differences by unleashing the power of what can be done." Resistance to malaria. Blue eyes. Lactose tolerance. What do all of these traits have in common? Every one of them has emerged in the last 10,000 years. Scientists have long believed that the "great leap forward" that occurred some 40,000 to 50,000 years ago in Europe marked end of significant biological evolution in humans. In this stunningly original account of our evolutionary history, top scholars Gregory Cochran and Henry Harpending reject this conventional wisdom and reveal that the human species has undergone a storm of genetic change much more recently. Human evolution in fact accelerated after civilization arose, they contend, and these ongoing changes have played a pivotal role in human history. They argue that biology explains the expansion of the Indo-Europeans, the European conquest of the Americas, and European Jews' rise to intellectual prominence. In each of these cases, the key was recent genetic change: adult milk tolerance in the early Indo-Europeans that allowed for a new way of life, increased disease resistance among the Europeans settling America, and new versions of neurological genes among European Jews. Ranging across subjects as diverse as human domestication, Neanderthal hybridization, and IQ tests, Cochran and Harpending's analysis demonstrates convincingly that human genetics have changed and can continue to change much more rapidly than scientists have previously believed. A provocative and fascinating new look at human evolution that turns conventional wisdom on its head, The 10,000 Year Explosion reveals the ongoing interplay between culture and biology in the making of the human race.

Abandoned as an infant, abducted as a 5 year old, and abused throughout most of her young life, Dana Cryer grew up in seclusion without any outside contact or schooling. There were no bedtime stories or favorite children's books. There were no playmates, no toys, no dolls. No holidays or birthdays. She could not run and play in the sunshine. Abandoned but Not Forsaken tells the amazing true story of how God wonderfully and miraculously saved and delivered Dana from a life of abuse, mental duress, and suicidal depression. This is also the story of restoration and forgiveness. Dana shares how, through a series of divine encounters, God brought people into her life to break through the hard shell around her heart and reveal His unconditional love for her. As a result, a lifetime of despair, mental anguish and fear melted away. This a life-changing message of hope, deliverance, and healing for anyone who has been bound by the chains of abuse, fear, or depression.

How do we sustain school reform? How do we get results--and measure them in terms of student achievement? In this expanded 2nd edition of Results, Mike Schmoker answers these and other questions by focusing on student learning. By (1) setting goals, (2).
