Volumes have been written about the value of more and better education. But is there sufficient evidence to support the commonly held belief that we, as individuals and as a community, should be investing more in education? This book explores that question in unprecedented detail, drawing on empirical evidence from an impressive

array of sources. While much of the focus is on the educational system in the United Kingdom, the book offers lessons of international applicability. A state-of-the-art compendium on education policy and its impact on educational attainment, the book examines numerous large-scale data sources on individual pupils and schools. The

questions the book considers are far-ranging: How much do teachers matter for children's educational attainment? What payoff do people get from acquiring more education when they enter the labor market? How well do education systems function to provide employers with the skills they want? The book concludes by issuing some strong

they have limited technical development and managers struggle to make meaningful comparisons between outcomes and targets. In education, well-publicised attempts have been made to establish - some would say impose - a set of criteria by which organisations judge success or failure. These have been largely subjective - the percentage
