Welcome to Real-Time Bluetooth Networks - Shape the World. This book, now in its second printing December 2017, offers a format geared towards hands-on self-paced learning. The overarching goal is to give you the student an experience with real-time operating systems that is based on the design and development of a simplified RTOS that exercises all the fundamental concepts. To keep the discourse grounded in practice we have refrained from going too deep into any one topic. We believe this will equip the student with the knowledge necessary to explore more advanced topics on their own. In essence, we will teach you the skills of the trade, but mastery is the journey you will have to undertake on your own. An operating system (OS) is layer of software that sits on top of the hardware. It manages the hardware resources so that the applications have the illusion that they own the hardware all to themselves. A real-time system is one that not only gets the correct answer but gets the correct answer at the correct time. Design and development of an OS therefore requires both, understanding the underlying architecture in terms of the interface (instruction set architecture, ISA) it provides to the software, and organizing the software to exploit this interface and present it to user applications. The decisions made in effectively managing the underlying architecture becomes more crucial in real-time systems as the performance (specifically timing) demands go beyond simple logical correctness. The architecture we will focus on is the ARM ISA, which is a very popular architecture in the embedded device ecosystem where real-time systems proliferate. A quick introduction to the ISA will be followed by specifics of TI's offering of this ISA as the Tiva and MSP432 Launchpad microcontroller. To

make the development truly compelling we need a target application that has real-time constraints and multi-threading needs. To that end you will incrementally build a personal fitness device with Bluetooth connectivity. The Bluetooth connectivity will expose you to the evolving domain of Internet-of-things (IoT) where our personal fitness device running a custom RTOS will interact with a smartphone.

The truly world-wide reach of the Web has brought with it a new realisation of the enormous importance of usability and user interface design. In the last ten years, much has become understood about what works in search interfaces from a usability perspective, and what does not. Researchers and practitioners have developed a wide range of innovative interface ideas, but only the most broadly acceptable make their way into major web search engines. This book summarizes these developments, presenting the state of the art of search interface design, both in academic research and in deployment in commercial systems. Many books describe the algorithms behind search engines and information retrieval systems, but the unique focus of this book is specifically on the user interface. It will be welcomed by industry professionals who design systems

that use search interfaces as well as graduate students and academic researchers who investigate information systems.

Inspiring devotional reading from two classic writers Both Andrew Murray and C. H. Spurgeon wrote and taught about the immeasurable value of intercessory prayer in the life of every believer and the entire church. They believed that persistent, fervent prayer is, perhaps, the greatest work that every Christian can do by the grace of God and in the power of the Holy Spirit. Spurgeon told his congregation, "No one can do me a truer kindness in this world than to pray for me." Editor L. G. Parkhurst has compiled selections on this important topic from Murray's devotional books and Spurgeon's sermons updating them for today's reader. The thirty-one devotionals begin with a reading by Murray, then Spurgeon's commentary on that aspect of intercession as well as a concluding prayer. The Believer's Secret of Intercession powerfully persuades us to labor together and individually in fervent prayer so that sinners might be converted and blessings might fall upon the saints of God. A unique devotional handbook on a topic of great importance for the church today.
