When somebody should go to the books stores, search introduction by shop, shelf by shelf, it is in point of fact

A guide to cable modems includes tutorials, diagrams, source code examples, hardware schematics, and hacks to get the most out of this Internet connection.

In this ebook exclusive, Boston Globe film critic Ty Burr introduces the fifty films every movie lover must know. This carefully curated list of great movies spans over a century of filmmaking, from the silent era to the last decade, from American favorites to international classics. Including recognized masterpieces such as "City Lights" and "Casablanca," as well as more recent movies like "Aliens" and "Fight Club," Burr has given readers what is essentially an engaging, accessible Film 101 class. Short entries discuss the significance of each movie, the reason for its greatness, and why it has become a part of our shared culture of movie-making. He also includes suggestions for further viewing, delving deeper into the works of featured directors like Hitchcock, Fellini, Sturges, and Kurosawa. In a media environment that gives endless entertainment options—including an intimidating amount of mediocre films—Ty Burr has written an expert guide to the movies that are guaranteed to please readers, and increase their cinematic knowledge. It is a perfect book for movie-lovers who are just getting acquainted with the immense catalog of great cinema available to us today.

An introduction to linear time playing. The first section contains basic exercises for linear playing skills: voice coordination, dynamic balance, accenting, and more. The second section deals with the development of time feels in the linear style, including 4/4, half-time, shuffle, and odd meter feels.

"A superior book. . . . Many readers will be surprised to see that today's arguments about history education follow the culture wars that go back to almost the beginning of the republic. Moreau's writing is engaging, with brilliant flashes of insight, as well as balance and wit." --Gary B. Nash, Director of the National Center for History in the Schools
Taking Frances FitzGerald's textbook study America Revised as a point of departure, Joseph Moreau in Schoolbook Nation challenges FitzGerald's premise that the 1960s were the beginning of the end of the glory days of American history education. Moreau recounts how in the late twentieth century, cultural commentators such as historian Arthur Schlesinger Jr. and politician Newt Gingrich preached that a new identity crisis had shaken American history in the sixties, and that the grand unified view of our past had given way to various interest groups, who dismantled the old national narrative while demanding a more "inclusive" curriculum for their children. Moreau discovered, however, that American history, while grand, has never been unified. Delving into more than 100 history books from the last 150 years, the author reveals that the efforts of pressure groups to influence the history curriculum are nearly as old as the mustiest textbook. "For those who would influence textbooks and teaching-Protestant elites in the 1870s, Irish-Americans in the 1920s, and conservative politicians today-the sky has always been falling," according to Moreau. Schoolbook Nation offers a history lesson of its own: when the story of the past is written or rewritten, truth is often a victim. With its comprehensive treatment of the subjects of honesty and politics in the teaching of history, this is an essential book on the side of truth in a complex debate.

The articles collected in this book cover a wide range of materials with extraordinary superconducting and magnetic properties. For many of the materials studied, strong electronic correlations provide a link between these two phenomena which were long thought to be highly antagonistic. The book reports both the progress in our understanding of fundamental physical processes and the advances made towards the development of devices.

Japan's greatest seer, the blind prophet Hinoto, has foretold the end of the world. At the center of her prophecy is a young man named Kamui Shiro, who possesses startling psychic powers. Although Kamui's future seems to have been predetermined from his birth, he has a choice--save the earth, or destroy it.

5G Physical Layer: Principles, Models and Technology Components explains fundamental physical layer design principles, models and components for the 5G new radio access technology – 5G New Radio (NR). The physical layer models include radio wave propagation and hardware impairments for the full range of frequencies considered for the 5G NR (up to 100 GHz). The physical layer technologies include flexible multi-carrier waveforms, advanced multi-antenna solutions, and channel coding schemes for a wide range of services, deployments, and frequencies envisioned for 5G and beyond. A MATLAB-based link level simulator is included to explore various design options. 5G Physical Layer is very suitable for wireless system designers and researchers: basic understanding of communication theory and signal processing is assumed, but familiarity with 4G and 5G standards is not required. With this book the reader will learn: The fundamentals of the 5G NR physical layer (waveform, modulation, numerology, channel codes, and multi-antenna schemes). Why certain PHY technologies have been adopted for the 5G NR. The fundamental physical limitations imposed by radio wave propagation and hardware impairments. How the fundamental 5G NR physical layer functionalities (e.g., parameters/methods/schemes) should be realized. The content includes: A global view of 5G development – concept, standardization, spectrum allocation, use cases and requirements, trials, and future commercial deployments. The fundamentals behind the 5G NR physical layer specification in 3GPP. Radio wave propagation and channel modeling for 5G and beyond. Modeling of hardware impairments for future base stations and devices. Flexible multi-carrier waveforms, multi-antenna solutions, and channel coding schemes for 5G and beyond. A simulator including hardware impairments, radio propagation, and various waveforms. Ali Zaidi is a strategic product manager at Ericsson, Sweden. Fredrik Athley is a senior researcher at Ericsson, Sweden. Jonas Medbo and Ulf Gustavsson are senior specialists at Ericsson, Sweden. Xiaoming Chen is a professor at Xi'an Jiaotong University, China. Giuseppe Durisi is a professor at Chalmers University of Technology, Sweden, and a guest researcher at Ericsson, Sweden.

When danger to the sheep leaves no alternative, a young Navajo boy breaks his promise to his father and is rewarded for his courage and good judgment.
