Fur seals are any of nine species of pinnipeds belonging to the subfamily Arctocephalinae in the family Otariidae. They are much more closely related to sea lions than true seals, and share with them external ears, relatively long and muscular foreflippers, and the ability to walk on all fours. They are marked by their dense underfur, which made them a long-time object of commercial hunting. Eight species belong to the genus Arctocephalus and are found primarily in the Southern Hemisphere, while

~~Fur seal - Wikipedia~~

Fur seals and sea lions belong to a group called otariids (oh-tar-eye-ids), which are commonly known as "eared" seals. Phocids (foh-sids) are commonly known as "earless" seals. This means that fur seals and sea lions are more closely related to each other than they are to "earless" seals, which is why they do look so similar!
