## Solution Manual

The highest Doppler shift would be observed in the plane of the satellite at the orbital height of the satellite: the satellite would be coming directly at the observer or directly 2-3 away from the observer. The

# Access Free Solution Manual

maximum Doppler shift would therefore be the sum of these two values. The orbital velocity was calculated in question 2 as 7,713.066 m/s. Using equation (2.44a),  $f / f_T = V_T / v_p$ , where  $f$  is the Doppler frequency,  $f_T$  is the frequency of the transmitter at rest,  $V_T$  is the component of ...
