Sonically, the S185 sounds a little leaner and harder than other  
players in the Sony stable. During The A-Team, the action doesn't  
quite boast the solidity of, say, the BDP-S380, but it's rhythmic  
enough with movie soundtracks, while CDs don't sound too shabby

An all-new digital single—part of the New York Times bestselling series based on the blockbuster Xbox® games! The military-grade artificial intelligence known as Iona has only one week to live. After that, the UNSC will legally terminate her seven-year existence in order to stave off the threat of the data corruption phenomenon known as “rampancy,” a condition that will eventually take hold of her functionality and persona, endangering all those around her. In a last-ditch effort to save herself, Iona has successfully launched an unprecedented legal appeal against her own death sentence—a case being watched very closely at not only the highest levels of human government, but by others with a very different agenda...

Evidence from the public health sector demonstrates that health care is only one of the determinants of health, which also include genes, behavior, social factors, and the built environment. These contextual elements are key to understanding why health care organizations are motivated to focus beyond their walls and to consider and respond in unprecedented ways to the social needs of patients, including transportation needs. In June 2016 the National Academies of Sciences, Engineering, and Medicine held a joint workshop to explore partnerships, data, and measurement at the intersection of the health care and transportation sectors. This publication summarizes the presentations and discussions from the workshop.

Language and Conscious Experience is a philosophical theory of consciousness. The book presents a theory that accommodates every aspect of consciousness and conscious experience. The aspects referred to are perception, imagery including memory and dreams, feelings (emotion) and the acquisition and development of language including the origination of meaning. The nature of consciousness is the energies detected by sensory receptors. The nature of conscious experience is the detection by spindle receptors of energies developed and enhanced in intrafusal muscle spindles. We experience the environment in the form of sensations: sight, hearing, taste, smell, and touch, to use the common and traditional identifications. Consciousness is experienced by the detection of intrafusal muscle spindles. The spindle receptor detection is analogous to the detection of the environment by sensory receptors. The difference, of course, is that we are conscious as the detection of the intrafusal spindles. The purpose of the neuromuscular system is response to the energies of the environment. The purpose of the intrafusal spindles is to control the neuromuscular system. Efferent impulse activity from synaptic activity enhances the intrafusal spindles that can then be detected as conscious experience. Energies developed in the intrafusal spindles are determined by the innervation of the system. When enhanced from configured synaptic activity the innervation is modified by the synaptic activity configured by experience.

1948. The creation of the Hebrew state is proving to be not exactly a peaceful affair, starting with the Egyptian bombs that are regularly falling on Tel-Aviv. All that Israel has to fight the lethal enemy 'Spitfires' are some old 'Mezek', flown by Jewish volunteers from all over the world, but also mercenaries from rather more sinister backgrounds. Bjorn is one of those mercenaries. He's come to risk his life for several million dollars, a fact that galls his brothers-in-arms, who are fighting not for cash but for their ideals!
