Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the third-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

"With the collaboration of a number of dedicated teachers and their students, Susan Empson and Linda Levi have produced a volume that is faithful to the basic principles of CGI while at the same time covering new ground with insight and innovation." -Thomas P. Carpenter This highly anticipated follow-up volume to the landmark Children's Mathematics: Cognitively Guided Instruction addresses the urgent need to help teachers understand and teach fraction concepts. Fractions remain one of the key stumbling blocks in math education, and here Empson and Levi lay a foundation for understanding fractions and decimals in ways that build conceptual learning. They show how the same kinds of intuitive knowledge and sense making that provides the basis for children's learning of whole number arithmetic can be extended to fractions and decimals. Just as they did in Children's Mathematics and Thinking Mathematically, Empson and Levi provide important insights into children's thinking and alternative approaches to solving problems. Three themes appear throughout the book: building meaning for fractions and decimals through discussing and solving word problems the progression of children's strategies for solving fraction word problems and equations from direct modeling through relational thinking designing instruction that capitalizes on students' relational thinking strategies to integrate algebra into teaching and learning fractions. With illuminating examples of student work, classroom vignettes, "Teacher Commentaries" from the field, sample problems and instructional guides provided in each chapter, you'll have all the tools you need to teach fractions and decimals with understanding and confidence.

How do teens know when they might be "one click away from the clink"? In Teen Cyberbullying Investigated, Judge Tom Jacobs presents a powerful collection of landmark court cases involving teens and charges of cyberbullying, which includes: sending insulting or threatening emails, text, or instant messages directly to someone; spreading hateful comments about someone through emails, blogs, or chat rooms; stealing passwords and sending out threatening messages using a false identity; and building a Web site to target specific people. Each chapter features the seminal case and resulting decision, asks readers whether they agree with the decision, and urges them to think about how the decision affects their lives. Chapters also include related cases, important facts and statistics, and suggestions for further reading. With an ever-increasing number of serious cases of cyberbullying and school violence, this book is needed more urgently than ever.

Mark Twain. When young Mark Twain's hopes of striking it rich in South America are dashed, he sets out to follow his boyhood dream--becoming a steamboat pilot. 48 pages. Tale Blazers.

In this sequel to his first volume of autobiography *Pride and Perjury*, Aitken starts his story as he is taken down from the courtroom and incarcerated at Her Majesty's Pleasure. How this Old Etonian former Cabinet Minister on Mrs Thatcher's inner circle managed to establish new relationships and lasting friendships with fellow prisoners is fascinating - so too is this account of how religious belief transformed his life. Aitken has lost none of his charm, fluency and determination - and he has found an authentic new life which readers of this entertaining new book will be able to judge for themselves. 'A rich collection of humorous tales of prison life... Aitken seems to have found a new vocation of both a funny writer and a serious prison reformer.' *Tablet*

Chemical reaction engineering is concerned with the exploitation of chemical reactions on a commercial scale. Its goal is the successful design and operation of chemical reactors. This text emphasizes qualitative arguments, simple design methods, graphical procedures, and frequent comparison of capabilities of the major reactor types. Simple ideas are treated first, and are then extended to the more complex.
