The British Patent System during the Industrial Revolution ...

During the1850s the British patent system was subject to major reforms. As part of the reforms, English patents granted between 1617 and 30 September 1852 were identified from the Rolls, sorted into chronological order and then numbered in a single continuous sequence. The sequence runs from GB1 of 1617 to GB14359 of September 1852.

Six significant moments in patent history | Reuters

The English patent system evolved from its medieval origins into a system that recognised intellectual property; this encouraged invention and spurred on the Industrial Revolution from the late 18th century.

List of British innovations and discoveries - Wikipedia

The primary motive of British imperialism in China in the nineteenth century was economic. There was a high demand for Chinese tea, silk and porcelain in the British market. However, Britain did not possess sufficient silver to trade with the Qing Empire. Thus, a system of barter based on Indian opium was created to bridge this problem of payment.

British Imperialism in China | Guided History

British Empire, a worldwide system of dependencies— colonies, protectorates, and other territories—that over a span of some three centuries was brought under the sovereignty of the crown of Great Britain and the administration of the British government. The policy of granting or recognizing significant degrees of self-government by dependencies, which was favoured by the far-flung nature ...

The British Patent System during the Industrial Revolution 1700–1852 presents a fundamental reassessment of the contribution of patenting to British industrialisation during the eighteenth and nineteenth centuries. It shows that despite the absence of legislative reform, the British patent system was continually evolving and responding to the needs of an industrialising economy. Inventors were able to obtain and enforce patent rights with relative ease. This placed Britain in an exceptional position. Until other countries began to enact patent laws in the 1790s, it was the only country where inventors were frequently able to appropriate returns from obtaining intellectual property rights, thus encouraging them to develop the new technology industrialisation required.

“The British Patent System and the Industrial Revolution 1700–1852 presents a fundamental reassessment of the contribution of patenting to British industrialisation during the eighteenth and nineteenth centuries. It shows that despite the absence of legislative reform, the British patent system was continually evolving and responding to the needs of an industrialising economy. Inventors were able to obtain and enforce patent rights with relative ease. This placed Britain in an exceptional position. Until other countries began to enact patent laws in the 1790s, it was the only country where inventors were frequently able to appropriate returns from obtaining intellectual property rights, thus encouraging them to develop the new technology industrialisation required”--

This book examines the development of the English patent system and its relationship with technical change during the period between 1660 and 1800, when the patent system evolved from an instrument of royal patronage into one of commercial competition among the inventors and manufacturers of the Industrial Revolution. It analyses the legal and political framework within which patenting took place and gives an account of the motivations and fortunes of patentees, who obtained patents for a variety of purposes beyond the simple protection of an invention. It includes the first in-depth attempt to gauge the reliability of the patent statistics as a measure of inventive activity and technical change in the early part of the Industrial Revolution, and suggests that the distribution of patents is a better guide to the advance of capitalism than to the centres of inventive activity. It also queries the common assumption that the chief goal of inventors was to save labour, and examines contemporary criticism of the patent system in the light of the changing conceptualisation of invention among natural scientists and political economists.
