Read Online The Henderson Hasselbalch

The Henderson–Hasselbalch equation can be used to calculate the pH of a solution containing the acid and one of its salts, that is, of a buffer solution. With bases, if the value of an equilibrium constant is known in the form of a base association constant, K_b the dissociation constant of the

Read Online The Henderson Hasselbalch

conjugate acid may be calculated from
 $pK_a + pK_b = pK_w$

Henderson–Hasselbalch equation - Wikipedia

The Henderson-Hasselbalch equation
can be written as: $pH = pK_a + \log_{10} \left(\frac{[A^-]}{[HA]} \right)$ Where $[A^-]$ denotes the

Read Online The Henderson Hasselbalch

molar concentration of the conjugate base (of the acid) and $[HA]$ denotes the molar concentration of the weak acid. Therefore, the Henderson-Hasselbalch equation can also be written as:

Equation History And
Consider the dissociation equation for acetic acid: $\text{HAc} \rightleftharpoons \text{H}^+ + \text{Ac}^-$

Increasing the concentration of the acetate (Ac^-) will push the equilibrium back to the left, decreasing the concentration of H^+ . This makes the solution less acidic, making the pH of the buffer larger than the pure acid
