The School of Mathematical, Physical and Computational Sciences (SMPCS) is home to three leading Departments within the University of Reading – Mathematics and Statistics, Meteorology, and Computer Science. This coming together of three disciplines makes us one of the largest and most successful clusters of mathematical and computational sciences departments in the UK.

The physical, mathematical and computational models 1.1 Introduction In the Trekie language, the prime directive of a chemical engineer should be to explore and understand physical and chemical processes involved in converting a raw material into a useful product. Use this knowledge in designing, constructing and operating chemical process plants.

The physical, mathematical and computational models

Theoretical, Mathematical and Computational Physics - Books and Journals Theoretical physics aims to explain the phenomena of nature with the help of mathematical models. Our textbooks familiarize prospective physicists with the most important mathematical concepts and physical theories, such as quantum field theories, string theory, computer physics and, above all, relativity theory.

School of Mathematical Physical and Computational Sciences ...

Computational physics is the study and implementation of numerical analysis to solve problems in physics for which a quantitative theory already exists. Historically, computational physics was the first application of modern computers in science, and is now a subset of computational science. It is sometimes regarded as a subdiscipline of theoretical

Computational Models

Predictive computational science is a scientific discipline concerned with the formulation, calibration, numerical solution and validation of mathematical models designed to predict specific aspects of physical events, given initial and boundary conditions and a set of characterizing parameters and associated uncertainties.

Computational science - Wikipedia

Computational Mathematics, in particular the physical applied areas and the theory and implementation of numerical methods and algorithms, have wide-ranging applications in both the public and private sectors.

Mathematical, Physical, and Computational Sciences

In mathematical modelling, you want to come as close to the "true" physical model. That is all that you care about. You don't have any other constraints. In computational modelling, there is another constraint that you have to take care of.
